(54) Title: COMPOSITIONS, SPLICE VARIANTS AND METHODS RELATING TO COLON SPECIFIC GENES AND PRO-
TEINS

(57) Abstract: The present invention relates to newly identified nucleic acid molecules and polypeptides present in normal and neoplastic colon cells, including fragments, variants and derivatives of the nucleic acids and polypeptides. The present invention also relates to antibodies to the polypeptides of the invention, as well as agonists and antagonists of the polypeptides of the invention. The invention also relates to compositions containing the nucleic acid molecules, polypeptides, antibodies, agonists and antagonists of the invention and methods for the use of these compositions. These uses include identifying, diagnosing, monitoring, staging, imaging and treating colon cancer and non-cancerous disease states in colon, identifying colon tissue, monitoring and identifying and/or designing agonists and antagonists of polypeptides of the invention. The uses also include gene therapy, production of transgenic animals and cells, and production of engineered colon tissue for treatment and research.

INTERNATIONAL SEARCH REPORT

In application No.

PCT/US03/38808

Box I Observations where certain claims were found unsearchable (Continuation of Item 1 of first sheet)

This international report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claim Nos.:
because they relate to subject matter not required to be searched by this Authority, namely:
2. ☐ Claim Nos.:
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:
3. ☐ Claim Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of Item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:
Please See Continuation Sheet

1. ☐ As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
4. ☒ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.: 1-10 and 15-17 as they pertain to nucleic acids encoding SEQ ID NO: 95.

Remark on Protest

☐
☐

The additional search fees were accompanied by the applicant's protest.

No protest accompanied the payment of additional search fees.

BOX II. OBSERVATIONS WHERE UNITY OF INVENTION IS LACKING

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.

Group I, claim(s) 1-10, and 15-17 drawn to nucleic acids, nucleic acid molecular hybridization assays, vectors, host cells, methods for producing polypeptides, kits, vaccines, and methods of treatment using nucleic acids.

Group II, claim(s) 11, 12, and 16-18, drawn to polypeptides, kits, vaccines, and methods of treatment using polypeptides.

Group III, claim(s) 13-15, drawn to antibodies and protein binding assays.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The nucleic acids, vectors, host cells, nucleic acid containing kits, and nucleic acid vaccines of Group I are materially different from the polypeptides, kits containing polypeptides, and polypeptide vaccines of Group II, and the antibodies of Group III. The methods of Group I may be practiced without the products or compositions of Group II or the antibodies of Group III. The methods of Groups I-III may be practiced independently of one another. The polypeptides and vaccines of Group II are materially different from the antibodies of Group III and are not needed to practice the methods of Group III. Each of the Groups mentions or requires the use of 248 separate and unrelated nucleic acids and/or polypeptides; thus the total number of inventions is $3 \times 248 = 744$.

Each of the Groups mentions or requires the use of a large number of separate and unrelated nucleic acids and/or polypeptides. No matter which additional Group(s) applicant elects, applicant is further required to select for search one SEQ ID NO within the Group(s) for search. Any additional SEQ ID NO to be searched requires one additional search fee per SEQ ID NO. In the absence of payment of additional search fee(s) the first mentioned SEQ ID NO in Group I (*i.e.* SEQ ID NO: 95) will be searched. Should applicant pay fee(s) for additional Groups to be searched, the first mentioned SEQ ID NO within the selected Group will be searched unless applicant directs otherwise.
